

MIV Series

Multilayer Chip Inductor

Size 2012

FEATURES

- Monolithic inorganic material construction.
- Closed magnetic circuit avoids crosstalk.
- Shapes and dimensions follow E.I.A. spec and available in various sizes.
- Excellent solder ability and heat resistance.
- AEC-Q200 qualified
- Lead-free reflow soldering as referenced in JEDEC J-STD 020D and
- Operating Temperature: -55~+125 °C (Including self-temperature)

APPLICATION

-
-
- T- or π -Filter
- Automotive equipment

Dimensions: [mm]

Land Pattern: [mm]

Electrical Properties:

Part No	Inductance	Tolerance	Q Min.	Test Frequency	Temperature Rise Current Max.	DC Resistance Max.	SRF Min.	thickness H	Parking

Typical Electrical Characteristics:

Inductance VS. DC Current Characteristics:

Q VS. Frequency Characteristics:

Soldering Reflow:

Preheat condition: 150 ~200°C / 60~120 sec.

Allowed time above 217°C : 60~150 sec.

Max temperature: 260°C.

Allowed Reflow time: 2x max.

Packaging Information:

Tape Dimension:

Series	A0 (mm)	B0 (mm)	D (mm)	P0 (mm)	P1 (mm)	W (mm)	K0 (mm)	E (mm)	T (mm)
MIV2012	2.1±0.1	1.3/1.28±0.1	1.5±0.1	4.0±0.1	4.0±0.1	8.0±0.1	0.95/1.28±0.1	1.75±0.1	0.95/0.22±0.05

Peel force of top cover tape:

The peel force of top cover tape shall be between 0.15 to 0.58 N

Reel Dimension: [mm]

Packaging Quantity:

Cautions and Warnings:

Storage Conditions:

- The storage period is within 12 months after the completion of production. Be sure to follow the storage conditions (temperature: -5 to 35°C, humidity: 75% RH Max). If the storage period elapses, the soldering of the terminal electrodes may deteriorate. The warranty period is one year.
- Product should not be exposed to environment with high temperature, high humidity, dust, corrosive gas and etc.
- Products should be handled with care to avoid damage or contamination from perspiration and skin oils.
- Please always handle products carefully to prevent any damage caused by dropping down or inappropriate removing.

Operation Instructions:

- Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the set thermal design.
- Before soldering, be sure to preheat components. The preheating temperature should be set so that the temperature difference between the solder temperature and chip temperature does not exceed 150°C.
- Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.
- Generally, Koher might not be familiar with either customer's specific application or actual requests as customer does. As a result customer shall be responsible for checking and confirming whether Koher product with the performance described in the product specification is suitable for using in customer's particular application or not.
